Contents

1 Preliminaries. 5

2 Vrieties and identities. 7
- 2.1 Free Algebras. 7
- 2.2 Fully invariant congruences. 11
- 2.3 Birkhoff's Theorems for varieties. 12

3 Sums of semilattice ordered systems. 20
- 3.1 Examples. 23

4 Regular identities. 29
- 4.1 Definitions and properties. 29
- 4.2 Regular consequences, proofs of regular identities. 32

5 The operator R. 37
- 5.1 Representation theorems for algebras of Mod(R(V)). 38
- 5.2 Subdirectly irreducible algebras of Mod(R(V)). . 43
- 5.3 Jonsson's Lemma for regular shifts of varieties. . 44
- 5.4 Free algebras in Mod(R(V)). 46
- 5.5 Regular congruences. 48
- 5.6 Birkhoff's Theorems for regular shifts of varieties. 49
- 5.7 The lattice L(Mod(R(V))). 54
- 5.8 EIS property, amalgamation in Mod(R(V)). . . 56
- 5.9 Bases, finite bases, finite basis property. 58
- 5.10 The word problem for the regular shift of V. . . 59

6 Dual algebras and selfdual varieties. 60
- 6.1 Free Selfdual Algebras. 61
- 6.2 Selfdual congruences. 64
- 6.3 Birkhoff's type theorems for selfdual varieties. . 65

7 M-hyperidentities and M-varieties. 70
7.1 M-hypersubstitutions. 71
7.2 Free M-solid algebras. 73
7.3 M-totally invariant congruences. 75
7.4 Birkhoff's type theorems for M-hypevarieties. . 75

8 Generalizations. 82
8.1 Graphs. 82
8.2 Relational systems. 82
8.3 Double systems of algebras. 82

9 Pseudovarieties. 83
9.1 Operators on pseudodovarieties. 83
9.2 The lattice of pseudovarieties. 90

10 Regular pseudovarieties. 92
10.1 Jonsson's Lemma for regular shifts of pseudovarieties. 94
10.2 The lattice of subpseudovarieties of R(V). . . . 95

11 M-solid pseudovarieties. 100
